

First Look: Glitch Wizard for iOS - Glitch. GIF. Share.

Launching today, Glitch Wizard (half-price sale at \$0.99) gives you the power to glitch photos, create animated GIFs and share them to multiple social networks. Glitch Wizard runs images through audio filters, manipulates image hex, and performs a host of other experimental techniques that create unpredictable, beautiful results. It is the first app to export animations created through the process of glitching an image.

In Glitch Wizard, each glitch applied to an image creates a new frame of an animation. The resulting sequence can be played back, exported as a GIF or as a MOV, and shared directly to Twitter, Tumblr, Instagram and Facebook.

Glitch Wizard promotes the hard work of its wizards. Featured glitches, drawn directly from a curated Tumblr, are shown front and center when you open the app.

Check out ThinkRad's live-action trailer to get a true sense of the aesthetic:
